LIGHTS, CAMERAS, RAD?

Artificial Intelligence Technology Solutions (AITX) subsidiary, Robotic Assistance Devices (RAD), has signed a contract to provide robots to a high-profile, major television network series, due for release in June 2023.

The prime-time television show will feature several RAD robots interacting with cast members. RAD's ROAMEO, ROSA and SCOT models have also appeared in three upcoming films, including Blue Beetle.

The prime-time show is expected to draw 3.5 million to five million US viewers during its anticipated prime-time schedule, with the potential for international distribution, which could expand the robots' visibility further. RAD expects to release more information as permission and schedules allow.

ITALY MAY LIFT OPENAI CHATBOT BAN?

Italy's data protection authority blocked access to OpenAI's ChatGPT chatbot over concerns it violated the country's data privacy laws and the EU's GDPR. The authority will lift the ban if OpenAI enforces rules protecting minors and user data by September 30th. OpenAI must notify users on how ChatGPT stores data, enforce rules to protect minors, and require users to confirm they are 18 and older before using the software.

AITX and RAD Launch GPT-Powered Tools

Artificial Intelligence Technology Solutions (AITX) and its subsidiary, Robotic Assistance Devices (RAD), have announced the launch of three Generative Pre-trained Transformer (GPT)-powered tools to improve engagement with investors, sales prospects and technical support.

The AI language model, GPT-4, will power the three new applications: Advanced Investor Relations, Sales and Prospect Aid and Technical Troubleshooting and Support. The solutions are designed to enhance communication with clients, partners and stakeholders, while reducing overhead.

The tools are set to launch by the end of June 2023 and will improve transparency and engagement for investors, as well as accelerating sales and enhancing customer relationships.
